

**Entity Type Definitions**

- Entity type name and description:
- Estimated number of entities, and anticipated increase/decrease over time:
- Identifiers:
- Aliases:

**Relationship Definitions:**

- Membership (name):
- Cardinality:
- Optionality:
- Percentage of entities participating in pairings (for optional relationships):
- Expected number of pairings per entity type (for "cardinality = many" relationships):
- Transferability:

**Attribute Definitions:**

- Attribute name and description:
- Optionality:
- Source category (basic, derived, designed):
- Primitive domain (number, text, date, time):
- Length:
- Decimal places/positions (numbers only):
- Case sensitivity (text only):
- Permitted values:
- Default value or algorithm:
- Derivation algorithm (derived attributes only):
- Aliases:
